Nasco Inflatable Lungs Comparison Kit with Teacher Instructional DVD
Inflatable lungs provide an impressive and unforgettable hands-on demonstration by using real swine lungs. This kit is designed to demonstrate the effects of prolonged smoking, as well as compare the differences in color and texture of a simulated smoker's lung and a healthy lung. The smoker's lungs have a palpable internal tumor and a physical simulated external tumor to encourage students to feel the texture of real lung tissue and its variations. This kit includes an inflation rack assembly with tray, an air pump, a simulated healthy and smoker's lung, a dried cross section of a lung, an instructional DVD, a teacher's guide, and storage containers. The guide provides a detailed illustration of internal/external anatomy and supplemental information about lung cancer, other smoking related diseases, and air pollutants as well as guidelines for handling, use and storage of the reusable swine lungs. ⚠ CHOKING HAZARD (I). When your specimens arrive, keep them at room temperature and in the shipping bag/container they came in until you are ready to use them. Between classroom sessions, return specimens to a tightly closed plastic bag or airtight container to prevent them from drying out. If specimens begin to dry out over the course of an extended dissection, remoisten them with NASCOGuard® Humectant Fluid only (see right).

Specimens are biodegradable, so once the dissection is complete, they can be buried in an approved sanitary landfill or incinerated. Ambient fluids may be safely disposed via city sewers.

Purity Grades
Different applications may or may not require guaranteed purity levels of the chemicals being used. As a general rule, the higher the purity of a chemical, the higher the cost will be. For this reason, Nasco Education offers a variety of purities or grades of each chemical depending on the application. Common chemical grades are:

ACS Reagent Grade — Manufactured and guaranteed to the highest specifications as set by ACS (American Chemical Society). These chemicals are necessary for analytical applications requiring the most stringent standards.

Reagent Grade — These chemicals are guaranteed to meet or be below maximum impurity limits as stated. Reagent grade is suitable for use in general analytical testing.

Laboratory (Educational) Grade — The most economical of chemicals, these general, all-purpose chemicals are suitable for use in applications where no specific purity and/or other standards are specifically called for. They are suitable for almost all educational applications.

Biological Stains and Solutions — We have greatly expanded our offerings of biological stains and ready-to-use staining solutions. Every effort has been made to include affordable and practical small package sizes. All dry stains are of certifiable quality. They are for use in the most exacting work in biology, cytology, etc.

Indicators — As with biological stains, we have also expanded the indicators in our chemical list. Small, practical, and affordable package sizes are included. All indicators and indicator solutions are of the highest quality for laboratory use.

Health Notice
The chemicals listed are not sold for consumption, pharmaceutical, or medicinal purposes. They are sold only for research, commercial, and educational use under proper supervision. Only orders on school letterhead, purchase order forms, or phone orders with a school purchase order number will be accepted. Chemicals will be shipped only to the school address. Sorry, we cannot accept orders placed by individuals.

Shipping Containers and Costs
Nasco Education does not charge for cartons, labels, and other packaging materials. The listed price includes all handling and packaging charges that have been established and required by the DOT (Department of Transportation). Materials that require additional shipping charges are marked with a DOT icon.

EnviroScape® Nonpoint Source Watershed Model
Teaches the watershed concept as well as point and nonpoint source pollution. Two waterways flow into a larger water body, which is representative of a lake, river, bay, or ocean. Model tracks pollution from various nonpoint sources, including residential areas, forestry areas, transportation, recreation, agriculture, and construction, as well as from industry as a point source. Pollution and runoff are visually apparent when rain falling over landscape top carries soil (cocoa), chemicals (colored drink mixes), and oil (cocoa and water mixture) through a watershed to a body of water. Best management practices include felt buffer strips as vegetation, clay to create berms, and other methods to show conservation and water pollution prevention measures. Model Rocket Engine Bulk Packs

Everything needed to prepare rockets for flight: 24 rocket engines, 30 model rocket igniters, 24 reusable igniter plugs, and 75 squares (11.4 cm/4½") of recovery wadding. Cannot be shipped by air.

Quality-tested, green label, single-stage engines for high-performance flights. They deliver a smoke trail for easy tracking, and supply ejection power for the recovery system for your rocket's safe return. Total impulse is tailored to fit the various NARFAL classes. Designed for specific launch and flight functions; rocket engines are not reusable.

Code designation stamped on the engine gives useful and important information on its performance capabilities.

- Indicates total impulse or total power produced by the engine
- Shows the engine's average thrust in Newtons and helps you choose the right engine for your rocket's flight
- Gives delay in seconds between burnout and ejection charge

PLA Filament
Created from plant products (corn, potatoes, or sugar beets), PLA is considered more earth-friendly compared to the petroleum-based ABS plastics. It's biodegradable and can be composted at most commercial facilities. Stronger and more rigid than ABS plastic. Printed objects will look and feel glossier than ABS. Can be sanded and machined. Do not leave in high temperatures (such as hot cars) since objects may deform and droop. When PLA is properly cooled, it has higher maximum printing speeds, lower layer heights, and sharper printed corners. Filament comes on a 2.2-lb. spool.
